DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3-5 are rejected under 35 U.S.C. 102(b) as being anticipated by USPN 5,368,393 to Normann. Normann (Fig. 4) discloses a multi-purpose ergonomic handle bar for plastic bags comprising;

a groove (21), at least one set of force dispersal holes (14) at both sides of the groove, wherein a handle string of a the plastic bag being placed into the groove of the handle bar thereby enabling comfortably carrying of the plastic bag.

As to claims 4 and 5, the ergonomic handle bar of Normann is a mono-body construction with force dispersal holes being horn shaped and round as seen in Fig. 1.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Normann in view of USPN 4,923,235 to Stewart.

Art Unit: 3677

Normann does not disclose two additional holes at the ends of the handle bar as claimed.

However, Stewart (Figs. 5 and 6) teaches a handle (42) useable with bags (32) having first and second force dispersal holes (50, 52) formed to receive carrying strings of the bag. Stewart also includes intermediate holes or openings (54, 56) juxtaposed with the force dispersal holes to receive other objects (58) a user may carry simultaneously with the bag(s). Therefore, it would have been obvious to one having ordinary skill in the art at the time of applicant's invention to modify the multi-purpose handle bar of Normann to include the intermediate holes as taught by Stewart to provide an enhanced multi-purpose handle bar including auxiliary holes or openings to assist a user in carrying a plurality of objects at one time. Or it is envisaged that the two intermediate openings or holes can provide a securement for the handle bar such as to a key ring of a user to avoid misplacement of the handle bar when not in use.

Conclusion

Additional references are cited on the PTO 892 form but were not used to determine patentability of this application instead the references gave background information on handle carrying devices.
